

Programming in OTREE: crash course
11-12 September 2023
Università di Pisa
L'EMbeds Laboratory -Sant' Anna School

Eager to learn how to program your own experiment?

We offer you a free 2 days programming course in OTREE!

OTREE is an *open-source* and *online software* for implementing interactive experiments in the laboratory, online, and the field. It uses *Python*, a popular, open-source programming language.

The course will be taught in English.

If you are interested in joining us, write an email as soon as possible to **esperimenti.pisa@gmail.com**, specifying **“OTREE COURSE REGISTRATION”** in the subject line.

No previous programming knowledge is required, but a basic knowledge of Python is a plus. For those without such knowledge, the **tutorial** at <https://otree.readthedocs.io/en/latest/python.html> may be useful.

For more information see: <https://otree.readthedocs.io/en/latest/#>

We are planning to offer an additional 4-hours course on web-scraping on 13th September. If you would like to attend this mini-course as well, express your interest in the same email.
